INVESTMENT GOAL

The aim of Haitong Aggressive Fund is to achieve a higher long-term return than the European markets incurring on similar market level of risk. The fund must include at least 80% of investment on European equity and it is allowed to invest up to 20% in other equity markets or other asset classes.

INVESTMENT POLICY

1. Assessment of the macro-economic outlook
2. Definition of the appropriate risk level for each context
3. Identification of the vehicles that, overall, provide the desired risk level: (i) liquidity; (ii) individual shares (iii) ETFs as they have daily liquidity and availability
4. Continuous review of the assessment made

OVERVIEW

October was one of our best months on record in terms of relative portfolio performance, as many of the investment convictions we had been building since the beginning of the year finally materialised.

The month was characterised by a major sector rotation — probably the most significant in recent years. More cyclical and value-oriented sectors, such as energy, chemicals, personal and household goods, and luxury, delivered very strong performances. By contrast, sectors with the largest weightings in traditional indices — technology, communications and semiconductors — were among the worst performers. In the United States, the Nasdaq 100 fell by approximately 6.7%, its worst month since March 2025, while the S&P 500 declined by just 0.9%. The equal-weighted S&P 500 gained almost 5%, marking the largest divergence from its market-capitalisation-weighted counterpart since 2009. In Europe, the DAX ended the month virtually flat, while the CAC 40 remained weighed down by persistent political uncertainty in France.

Artificial intelligence continued to influence market dynamics, with renewed concerns about the sustainability of investment in AI infrastructure and the potential cannibalisation effects that alternatives such as DeepSeek could have on major hyperscalers. Pressure on the technology sector was further exacerbated by a high volume of primary market issuance — both debt and equity — with large transactions from Meta and Anthropic's IPO bringing significant additional supply to the market, at a time when investors' capacity to absorb new issuance was beginning to show signs of fatigue.

On the macroeconomic front, the US Federal Reserve adopted a more cautious tone at its late-October meeting. In addition to the resilience of economic activity and the labour market, and persistently elevated inflation, Kevin Warsh also highlighted the tightening of financial conditions, reflected in the rise in long-term bond yields over recent months. The ECB kept its deposit rate unchanged at 2.50% at its 29 October meeting, following September's increase, adopting a wait-and-see approach to assess the cumulative impact of previous rate hikes. Eurozone inflation accelerated to 3.8% in September, driven by higher energy costs, while preliminary estimates for October pointed to stabilisation at around 4%. Oil prices rose sharply again during the month amid renewed tensions in the Middle East, with investors' concerns gradually shifting from inflation towards the potential damage to economic growth. The euro depreciated by approximately 1.5% against the US dollar, pressured by monetary policy divergence and political instability in France.

From a portfolio management perspective, October was a particularly active month. Early in the month, we reinforced our highest-conviction positions: we initiated positions in Danone, Vonovia, Lufthansa and Redeia, while increasing our exposure to Puig and the personal and household goods sector. We also executed a tactical trade in ASML, capturing a substantial gain in just two days. As the month progressed, we gradually took profits: we fully exited our position in Shell, realised gains in chemicals and software holdings, and closed our short position in the MIB index. Overall, trading activity was well above our usual levels, as we sought to reposition the portfolio in line with our medium-term investment convictions.

As a result, the portfolio gained approximately 3.48% during the month, clearly benefiting from its overweight exposure to the sectors that led the rotation and its underweight exposure to those that suffered the most. In an environment marked by significant performance divergences across traditional market indices, active management and disciplined security selection made a meaningful difference.

Looking ahead, we maintain a constructive outlook while remaining mindful of the risks. Although the ECB paused in October, developments in energy prices and their second-round effects on inflation could justify further interest rate increases in the coming months. Dispersion across sectors and geographies is likely to remain elevated, reinforcing the importance of active security selection. We remain committed to a disciplined and diversified investment approach, seeking to capture opportunities while maintaining a strong focus on risk management.

With real interest rates at current levels, the required return on risk assets is inevitably higher — something markets have largely overlooked as corporate earnings have continued to grow at a robust pace, particularly in AI-related segments. However, should long-term bond yields continue to rise, they will eventually weigh on investor sentiment and economic growth expectations, putting pressure on equity markets and potentially triggering a reversal of the upward trend in yields. Against this backdrop, the trajectory of bond yields, oil prices and central bank decisions are likely to remain the key drivers of financial markets.
