Summary Risk Indicator

OVERVIEW

In August, financial markets continued to be influenced by a combination of persistent geopolitical tensions, expectations of tighter monetary policy and a renewed rise in long-term interest rates. Although volatility increased towards the end of the month, risk assets delivered an overall positive performance, supported by the resilience of the US and European economies, a robust corporate earnings season and the recovery in the technology and energy sectors. Developments in the Middle East continued to play an important role in the macroeconomic backdrop. Although there were no significant disruptions to global energy supply, ongoing restrictions on maritime traffic through the Strait of Hormuz and renewed episodes of hostility between the United States and Iran contributed to a further increase in crude oil prices (+5.2% in August), which remained at elevated levels and continued to fuel inflation concerns. Nevertheless, the market reaction was considerably more muted than in previous months, reflecting the view that the economic impact may prove limited and temporary.

In Europe, the European Central Bank maintained a cautious stance. Concerns persisted regarding the second-round effects of the energy shock on wages and prices, while activity indicators surprised to the upside, providing greater support for another rate increase at the September meeting. Towards the end of the month, the annual Jackson Hole symposium in the United States took on particular significance. Federal Reserve Chair Kevin Warsh adopted a firmer tone than the market had anticipated, stressing that inflation remains too high and that the latest data may not yet be sufficient to confirm a sustained return to the 2% inflation target. Although he did not signal an imminent increase in policy rates, he reinforced the message that the Fed remains prepared to act should inflation once again surprise to the upside. His remarks prompted investors to reassess their monetary policy expectations, substantially increasing the implied probability of another rate hike over the coming meetings.

Against this backdrop, government bond markets were characterised by rising yields. In the United States, the 10-year Treasury yield ended the month close to 4.75%, while in Europe the German 10-year yield rose to 3.32%, reaching its highest level of the current monetary policy cycle. The combination of resilient economic growth, inflation still above central bank targets and expectations that interest rates will remain higher for longer was the main catalyst behind this move. Despite the pressure on government bonds, credit spreads remained relatively stable, supported by strong corporate earnings and low default rates.

Equity markets delivered an overall positive performance. In the United States, the S&P 500 gained approximately 2.6% during the month, while the Nasdaq rose by 3.9%, benefiting from the recovery in the technology sector following the correction recorded in July. Artificial Intelligence-related segments once again led the market, supported by solid corporate earnings and renewed investor confidence in companies' ability to monetise the substantial investments made over recent years. European equity markets also performed favourably, with the Euro Stoxx 50 rising by around 1%. Financials, basic resources and technology were among the strongest-performing sectors, while consumer-related and more defensive sectors, such as healthcare and utilities, underperformed.

Against this backdrop, the Fund delivered a modest return of 0.19% in August. The portfolio was negatively affected by its exposure to the consumer discretionary, healthcare and real estate sectors, as well as by its underweight position in financials. However, performance benefited from the strong contribution of several individual stocks, including Diageo, Puig and EDP Renováveis. In terms of portfolio activity, the most significant moves involved increasing exposure to the consumer sector through the purchase of Hermès and Diageo, while reducing exposure to SAP.

Overall, the key themes that shaped August — geopolitical developments, the evolution of inflation and the path of interest rates — are expected to remain major drivers of financial asset valuations over the coming weeks. Critical meetings of the world's leading central banks — the Federal Reserve, the European Central Bank, the Bank of England and the Bank of Japan — are likely to dominate the financial market agenda.
